# REPORT

RELATING TO THE REGISTRATION OF

# BIRTHS, MARRIAGES AND DEATHS

IN THE

# PROVINCE OF ONTARIO

FOR THE

YEAR ENDING 31st DECEMBER,

1893.

*PRINTED BY ORDER OF THE LEGISLATIVE ASSEMBLY.*

TORONTO:

WARWICK BROS. & RUTTER, PRINTERS, &c., 58 & 70 FRONT STREET WEST.  
1895.

OFFICE OF THE REGISTRAR-GENERAL FOR ONTARIO,  
TORONTO, January 1st, 1895.

*To the Honorable George Airey Kirkpatrick, LL.D., Q.C.,*  
*\*Lieutenant-Governor of the Province of Ontario.*

MAY IT PLEASE YOUR HONOR :

In compliance with the Statute in that behalf, the undersigned respectfully presents to Your Honor the Annual Report of Births, Marriages and Deaths for the year ending 31st December, 1893.

Respectfully submitted,

R. HARCOURT,

Registrar-General.

OFFICE OF THE REGISTRAR-GENERAL,  
TORONTO, January 1st, 1895.

TO THE HONORABLE RICHARD HARCOURT,  
Registrar-General of Ontario.

SIR,—I have the honor to submit for your approval the report respecting births, marriages and deaths registered in Ontario during the year 1893.

Population.

The population for the year 1893, which has been adopted as the basis of calculation for the mortality and other rates contained in this report, has been based upon the natural increase during the year, as determined by the difference between the total births and deaths as returned from the various municipalities of the province. As stated in the report of 1892, there is reason to believe that the birth returns are less complete than those of either marriages or deaths, and that in consequence the population from natural increase is greater than that used in the report as the basis of calculation. The exact rate of increase, according to the tables, will be found to be .00931 per cent., but it has been thought proper to adopt as a basis of calculation the natural increase of population as 1.0 per cent. This figure is one-tenth less than the ratio of increase adopted in the report for 1892.

As a consequence, the total calculated population of the counties, including all municipalities, is as will be found in Table 1.

By comparison with the population as given in the municipal returns published in the annual report of the Bureau of Industries for 1892, notable differences will be found in some counties. Similarly, were the differences between births and deaths in any particular county taken as the basis of these returns, notable differences in the percentage increase would be found.

Table A.—Showing Natural Increase of Population in 1893.

| Counties.                            | Population. | Increase of<br>births<br>over deaths. | Per cent. |
|--------------------------------------|-------------|---------------------------------------|-----------|
| Algoma .....                         | 44,912      | 678                                   | .0152     |
| Brant .....                          | 36,845      | 258                                   | .0070     |
| Bruce .....                          | 65,313      | 791                                   | .0120     |
| Carleton .....                       | 78,488      | 493                                   | .0050     |

| Simcoe .....                         | 72,515      | 870                                   | .0111     |
| Stormont, Dundas and Glengarry ..... | 70,501      | 466                                   | .0066     |
| Victoria .....                       | 33,352      | 304                                   | .0091     |
| Waterloo .....                       | 51,012      | 758                                   | .0148     |
| Welland .....                        | 30,967      | 263                                   | .0084     |
| Wellington .....                     | 60,089      | 630                                   | .0104     |
| Wentworth .....                      | 79,715      | 617                                   | .0077     |
| York .....                           | 254,677     | 1,419                                 | .0055     |

From the table of natural increase of population by counties, as given above, it is apparent that the distribution of the natural increase is very unequal, amounting in some counties to four times that in others. Such a condition is inexplicable on the supposition that the newly settled districts of Algoma, Haliburton, etc., have a more complete registration of births than older counties wherein municipal government is supposed to have become better developed, and hence other causes must be sought to explain such great differences.

A comparison of the figures in Table A with those in the following table will serve to throw some light upon the seeming anomalies presented in the rates of increase of population.

*Table B.—Showing the Increases or Decreases in Municipal Returns of Population Between 1882 and 1892 by Townships, Towns and Villages, and Cities.—I=Increase. D=Decrease.*

Summing up the information contained in the preceding table it appears that of the 40 counties in the province, the *increases*, and *decreases* by townships, by towns and villages, and by cities, between the years 1882 and 1892 are as in the following table:

*Table C.—Summary of Increase and Decrease of Population by Municipalities between 1882 and 1892.*

|   |  |         |
|---|--|---------|
| Townships—                                |  |         |
| Population, Increase in 10 counties ..... |  | 29,672  |
| “ Decrease in 30 counties .....           |  | 92,199  |
| Total decrease .....                      |  | 62,427  |
| Towns and villages—                       |  |         |
| Population, Increase in 32 counties ..... |  | 114,962 |
| “ Decrease in 7 “ .....                   |  | 5,089   |
| Total increase .....                      |  | 109,873 |
| Cities—                                   |  |         |
| Population, Increase in 11 cities .....   |  | 126,788 |
| “ Decrease in 1 city .....                |  | 462     |
| Total increase .....                      |  | 126,326 |

In order that a comparison can be instituted between actual increases and decreases in these different classes of municipalities and the natural increase in ten years at the rate for 1893, the following figures are given.

Table D.—Showing Increases and Decreases by Classes of Municipalities in Ten Years.

|                          | 1882.  | Increase, one<br>per cent. for ten<br>years. | Actual popula-<br>tion, 1892. |
|--------------------------|--------|--|-------------------------------|
| Algoma—                  |        |  |                               |
| Townships .....          | 6,036  | 6,699  | 16,520                        |
| Towns and villages ..... |        |  | 10,855                        |
| Brant—                   |        |  |                               |

| Total in townships . . . . .          | 1,120,574 | 1,243,816                                    | 1,103,433                     |
| Total in towns and villages . . . . . | 317,257   | 352,155                                      | 422,041                       |
| Total in cities . . . . .             | 259,455   | 287,655                                      | 385,019                       |

Thus it will be seen that there was in townships an absolute loss of population of 1.5 per cent. in the period, and a loss of 12.6 between the theoretical increase and the actual population in 1892. Again in the towns and villages there was an actual increase of practically 33 per cent., or 22 per cent. over the theoretical natural increase; while in the cities the actual increase was 49 per cent., or 38 per cent. more than the theoretical natural increase of one per cent. per year.

An analysis of the table given now becomes possible. Apparently there are three principal factors which enter into the explanation of the great variations in the rate of natural increase in different municipalities and counties.

By an examination of the following table, along with those in tables 1, 2, 3 of the report proper, we find that variations of a notable character in the rate per 1,000 of births, to some extent in that of marriages, and in that of deaths to a degree less than that of births, but greater than that of marriages have taken place.

A glance at the several tables, notably at table E, makes it plain that very notable irregularities of distribution of increase of population exist throughout the province, and nowhere more than in those counties where are situated the cities.

In the report for 1891 this notable difference in the ratio of natural increase in Ontario cities was set forth in tabular form, but to indicate that the differences in these play an apparently important part in the anomalies seen in the foregoing table, the rate of increase in cities is again inserted.

TABLE F.—*Making Comparison between Births and Deaths in 1891, 1892 and 1893, with Natural Increase.*

| City.               | Percentage increase. |       |       |

\* Actually more deaths returned than births.

† Omitted.

There are, however, other most striking variations dependent, apparently, on several factors.

Assuming an average correctness of returns, what is most noticeable is the high rate of increase in the frontier counties or districts. Thus Algoma, Essex, Haliburton, Muskoka and Parry Sound, Prescott and Russell, and Renfrew, all are amongst our most recently settled districts, Essex being peculiar from the fact that though there have existed many old settlements in the county, yet the immense improvements resulting from the operations of the Ontario Drainage Act have caused many new settlements to be formed during the last twenty years.

With these limitations the preceding factor explains perhaps in part the increase in the next highest group of increase; while in some degree too, we must look upon this group of counties as favorably situated as regards the death rate. High birth rates in cities have always been accompanied with relatively high death rates, but the following tables of the death rates, grouped in columns as above, taken from table 7, giving death rates for ten years, seem to indicate that taken over a series of years the inland counties are rather more favorable to health than others.

*Table G.—Showing Death Rate per 1,000 in 1893 by Groups of Counties.*

|                              |      |               |      |               |      |                           |      |
|------------------------------|------|---------------|------|---------------|------|---------------------------|------|
| Brant .....                  | 11.9 | Halton ....   | 9.6  | Bruce .....   | 7.7  | Algoma .....              | 10.3 |
| Carleton .....               | 17.2 | Lanark ....   | 8.6  | Dufferin ...  | 10.3 | Essex .....               | 13.4 |
| Elgin .....                  | 9.3  | Norfolk ....  | 8.4  | Grey .....    | 7.5  | Haliburton .....          | 8.2  |
| Frontenac .....              | 13.3 | Ontario ....  | 9.9  | Huron .....   | 7.9  | Muskoka & Parry Sound.    | 9.1  |
| Haldimand .....              | 8.5  | Oxford .....  | 10.5 | Kent .....    | 9.0  | Prescott and Russell .... | 13.5 |
| Hastings .....               | 10.1 | Peel .....    | 9.4  | Lambton ...   | 9.3  | Renfrew .....             | 8.6  |
| Leeds and Grenville .....    | 8.7  | Victoria .... | 9.1  | Perth .....   | 8.5  |                           |      |
| Lennox and Addington .....   | 8.2  | Welland ...   | 10.5 | Peterboro' .. | 10.8 |                           |      |
| Lincoln .....                | 12.5 | Wentworth ..  | 14.9 | Simcoe ....   | 7.8  |                           |      |
| Middlesex .....              | 10.7 |               |      | Waterloo ...  | 11.5 |                           |      |
| Northumberland and Durham.   | 9.5  |               |      | Wellington .  | 9.8  |                           |      |
| Prince Edward .....          | 11.6 |               |      |               |      |                           |      |
| Stormont, Dundas & Glengarry | 8.3  |               |      |               |      |                           |      |
| York .....                   | 18.2 |               |      |               |      |                           |      |

Thus in the first group the average deaths per 1,000=11.00  
 second group      "      "      "      = 9.98  
 third      "      "      "      = 9.10  
 fourth      "      "      "      =10.51

The last factor, viz., a lessened marriage and birth rate, might in some degree be illustrated by the same grouping of counties, with the marriage rate shown, were it not for the fact that the counties of the first column as shown in table E contain the majority of the cities and larger towns. The major part of rural marriages being solemnized in towns thereby makes the number of marriages reported from cities disproportionately large. This taken in connection with the table B showing the decreasing character of the rural population in many sections, has before been referred to in connection with the fact of a low birth rate owing to the removal of young and marriageable persons from country districts to neighboring towns, to the newly settled districts, or to other provinces or countries.

### Births.

As compared with 1892, there was an absolute increase in births in 1893 of 718, but the rate per 1,000 of 19.8 makes the rate practically the same. The most remarkable change recorded during the year is the increase in the city of Hamilton. The year 1892 showed a decrease of 424, or a birth rate of only 15.2 per 1,000, while 1893 shows an increase of 358 or a birth rate of 22.2 per 1,000. Similarly Ottawa, which showed a decrease in 1892 of 73, has in 1893 an increase of 355, or a birth rate which in 1892 was 16.4 per 1,000 became 24 per 1,000 in 1893. While owing to a large home for foundlings in Ottawa anomalies in the birth rate may be expected, it is very difficult to explain the great increase in Hamilton.

As compared with England the average birth rate for 1893 of 19.8 per 1,000 is very low, it being there in 1893 30.8 per 1,000, but lower than for ten years, though the latter is oddly exactly the same to a decimal as that in Scotland in 1892.

As already indicated the counties which show high birth rates are the newly settled districts, Algoma being 26.4, Essex with a considerable French population, and an abnormal birth rate in Windsor, has 27.7, Waterloo with a large German population, 25.6, Renfrew with a growing population in new districts, has 26.9, and Prescott and Russell with its notable influx of French from the Province of Quebec, has 30.7 per 1,000.

*Sex.*—The ratio of males to females of 1,065 to every 1,000 is almost identical with that for 1892. Curiously however, during the past four years the ratio is a slightly increasing one.

|  |   |   |       |   |       |
|--|---|---|-------|---|-------|
| Thus in 1890 the ratio was females 1,000, males 1,057. |   |   |       |   |       |
| 1891   | " | " | 1,000 | " | 1,061 |
| 1892   | " | " | 1,000 | " | 1,063 |
| 1893   | " | " | 1,000 | " | 1,065 |

The difference is notable as compared with England, where the ratio in 1893 was 1,000 to 1.038, practically the average for the preceding decennium, but less than the ratio for Scotland.

*Months.*—While minor alterations in the relative number of births by months occur in 1893 as compared with 1892, yet the relationship of the order of births to that of marriages is as usual noticeable.

*Illegitimate Births.*—The number of illegitimate births recorded in 1893 was 582 as compared with 526 in 1892. The ratio per 1,000 in that year was notably the lowest recorded, being 12.4 per 1,000 births, while that for 1893 is 13.6.

The following table illustrates the decrease in recent years :

|   |   |                             |
|---|---|-----------------------------|
| Illegitimate births in 1890, 978 or 19.7 per 1,000. |   |                             |
| "   | " | 1891 637 or 14.3 per 1,000. |
| "   | " | 1892 525 or 12.4 per 1,000. |
| "   | " | 1893 582 or 13.6 per 1,000  |

The birth of triplets was recorded once in 1893.

## Marriages.

The total number of marriages registered in Ontario during 1893 as seen in tables 12 and 13 of the report, was 14,475 or 28,950 persons, or 7.1 per 1,000. This is a decrease of 7 marriages from the total number recorded in 1892. Remembering the increase of population of 1 per cent., this means a falling off in the marriage rate from the preceding year, and is practically the same as that in 1891.

As stated in the report for 1892, the marriage rate during the last decade has remained very uniform. It is less, however, than in England, where the rate for 1893 was 7.35 per 1,000, which, however, is notably less than in 1891, it being 7.8 per 1,000, but is more than Scotland in 1892, the rate there being 7.05 per 1,000.

Increases occurred in 22 counties and decreases in 18. The notable fact exists, however, that there was a falling off in the 12 cities in 1893 of 387 marriages. This is made more remarkable in view of the fact that the cities in 1892 showed an increase of 149. These notable changes are principally in Ottawa, for which slight decreases occurred, in Toronto and in Hamilton both in 1892 and 1893. Ottawa while increasing 122 in 1892 showed a decrease in 1893 of 269. While Guelph showed a decrease in 1892 of 60, 1893 shows an increase of 33; and Windsor which had in 1892 an increase of 33 shows an increase in 1893 of 30. The total number of marriages solemnized in the cities is high, being 8.9 per 1,000 and notably above that for the whole province. The abnormally high marriage rate in Windsor of 501 or 47.5 per 1,000 increases very notably the marriage rate in cities, it being more than four times the average; while the great fluctuations at Ottawa, the rate being less than half the normal, while in 1892 it was above the

normal, indicate how border cities and those which have a special location, must be separated from the general tables if we wish to obtain an accurate idea of the influences at work affecting a marriage rate. The decrease in the year 1893 in England corresponds as usual as stated in the Registrar-General's Report "with a fall in the value of British exports and in the amount per head of population cleared at the Banker's Clearing House, and also with a fall in the price of wheat."

*Months.*—The number of marriages in each quarter of 1893, as seen in Table 13, bears the same relation as in previous years, and December as usual has the highest number, while August has the lowest. The number of imperfect returns, in which no date is given, is 44, being an increase over the previous year.

*Denominations.*—The order of marriages by denominations seen in Table 12, is exactly the same as in 1892, and the percentage of marriages belonging to each is almost exactly the same. The number of marriages solemnized by clergymen neglecting to return their denomination is less than in 1892, it being 206 or .7 of 1 per cent. of the whole.

### Deaths.

The total deaths for 1893 in the whole Province as seen in Table 1 of the report proper, was 22,903, being less than in 1892 by 217. This means on the basis of population adopted and already referred to, a death rate of 10.6 per 1,000.

The following comparative table is of interest as it shows the high, absolute and relative position which Ontario holds in the matter of the health of its population. While its urban populations have notably increased during the past decade, it has been in only a few instances that this growth has been too fast for the ability of municipal authority to deal with the sanitary problems developed by their new conditions.

*Table H.—Death Rate in various Countries in 1892 and 1893.*

| Country.                  | Ratio per 1,000. | Country.                  | Ratio per 1,000. |
|---------------------------|------------------|---------------------------|------------------|
| Connecticut (1893).....   | 19.0             | Scotland (1893).....      | 19.4             |
| Indiana (1893).....       | 8.0              | Ireland (1893).....       | 17.9             |
| California (1893).....    | 10.5             | Denmark (1893).....       | 18.9             |
| Michigan (1892).....      | 10.0             | Norway (1893).....        | 16.4             |
| New Hampshire (1892)..... | 20.8             | Switzerland (1893).....   | 20.5             |
| New York (1892).....      | 19.70            | France (1892).....        | 22.6             |
| " (1893).....             | 19.00            | Italy (1893).....         | 25.3             |
| England (1893).....       | 19.2             | German Empire (1893)..... | 24.6             |
|                           |                  | Ontario (1893).....       | 10.6             |

In Tables 3, 4 and 5 will be found a recapitulation of causes of death by classes. Summarized for the whole province the results therein are as follows:

| Class of disease.            | 1892.  | 1893.  | I.=Increase.<br>D.=Decrease. |
|------------------------------|--------|--------|------------------------------|
| Zymotic diseases.....        | 4,670  | 4,116  | D. 554                       |
| Constitutional diseases..... | 4,711  | 4,693  | D. 18                        |
| Local diseases.....          | 8,211  | 8,394  | I. 183                       |
| Developmental diseases.....  | 3,921  | 4,366  | I. 445                       |
| Violent deaths.....          | 845    | 769    | D. 76                        |
| Cause not specified.....     | 762    | 565    | D. 197                       |
| Totals.....                  | 23,120 | 22,903 | D. 217                       |

The tables have to be corrected by the subtraction from the table of deaths by counties, the deaths in the city of Brantford and in the towns of Woodstock, Whitby, Sarnia, Port Arthur, Port Hope, Picton, Pembroke, Owen Sound, Napanee, Goderich, Cobourg and Brampton, these likewise appearing in Tables 5 and 6 amongst the death rate for cities and towns.

What is the most apparent in the above table is the falling off in contagious diseases included under the class of zymotic.

While the total decrease for the whole province amounts to nearly 12 per cent. of the deaths in 1892, under the zymotic class, that in the cities apart from the counties was only 8 per cent.

The increase in local diseases and in developmental diseases is made up in part from the decrease of 197 over 1892 of deaths returned for which no name was given. There is in this an evidence not only of increased attention on the part of the division registrars but also of the fact that physicians everywhere are becoming more precise in their description of the causes of disease.

*Cities.*—The death rate in Ontario cities as seen in Table 2, is practically the same as in 1892, being 17.1 per 1,000 of the estimated population. The comparison with city deaths in other countries may be made from the following table:

Table I.—Deaths in various Cities, with ratio per 1,000 of Population.

| Cities.         | Year. | Number of deaths. | Population. | Ratio per 1,000 of population. |
|-----------------|-------|-------------------|-------------|--------------------------------|
| New York.....   | 1893  | 45,219            | 1,860,803   | 24.3                           |
| Albany.....     | 1893  | 2,140             | 98,000      | 21.8                           |
| Rochester.....  | 1893  | 2,571             | 150,000     | 17.2                           |
| Buffalo.....    | 1893  | 5,711             | 300,000     | 19.1                           |
| Denver.....     | 1893  | 1,734             | 125,000     | 13.8                           |
| Cincinnati..... | 1893  | 5,919             | 296,908     | 19.9                           |
| Cleveland.....  | 1893  | 5,134             | 261,353     | 19.9                           |
| Detroit.....    | 1892  | 3,139             | 237,835     | 14.2                           |

There was an absolute increase of 145 deaths in the twelve cities. By classification of disease we have them distributed as follows:

| Class of disease.            | 1892. | 1893. | Increase or decrease. |
|------------------------------|-------|-------|-----------------------|
| Zymotic diseases.....        | 1,580 | 1,453 | D. 127                |
| Constitutional diseases..... | 1,445 | 1,450 | I. 5                  |
| Local diseases.....          | 2,578 | 2,702 | I. 124                |
| Developmental diseases.....  | 1,039 | 1,160 | I. 121                |
| Violent deaths.....          | 205   | 196   | D. 9                  |
| Cause not specified.....     | 103   | 81    | D. 22                 |

The decrease is almost wholly due to the lessened prevalence of zymotic or contagious diseases; and while the number under *cause not specified* is notably decreased, this simply means an increased accuracy of registrations. The falling off in contagious diseases is quite remarkable, it being rather more than 8 per cent. of the total number returned in 1892. Reference to the returns for the separate cities found in the appendix will indicate particularly in what cities the decrease has been especially marked.

Amongst the individual diseases the decrease of diphtheria is at once noticeable in the following tables.

Table J.—Total Deaths in Cities of Ontario, 1893, from Zymotic Diseases, with rates per 1,000, compared with 1892.

|                   | Diphtheria.<br>Rate per 1,000. |       | Typhoid Fever.<br>Rate per 1,000. |       | Influenza.<br>Rate per 1,000. |       | Scarlet Fever.<br>Rate per 1,000. |       | Measles.<br>Rate per 1,000. |       | Whooping Cough.<br>Rate per 1,000. |       | Phthisis.<br>Rate per 1,000. |       |       |       |       |       |       |       |       |       |       |       |       |       |     |       |     |

## DIAGRAM

Shewing Deaths from Tuberculosis by Groups of Counties and by Cities in Ontario. Average per 1000 in 1892-1893.

There was in 1893 a decrease of diphtheria from .87 to .60 per 1,000 of population in the cities; while scarlatina gave a total mortality of 146 for the cities, showing an upward tendency from the 99 deaths of the preceding year.

The mortality from tuberculosis in the cities of the province stands at the high figures seen in 1892. That cities elsewhere may have in many instances a higher death rate cannot in any degree be consolatory, since it shows that nearly one in every 500 of the population dies every year from tuberculosis, and that at least one in every 250 is suffering from the disease. Relatively to the whole province it is high as seen by the country population apart from the large cities.

There was in 1893 a decrease of diphtheria for .87 to .60 per thousand of population in the cities; while scarlatina gave a total mortality of 146 for the cities, showing an upward tendency from the 99 deaths of the preceding year.

*Tuberculosis.* The mortality from tuberculosis in the cities of the province stands at the high figures seen in 1892. That cities elsewhere may have had in many instances a higher death-rate cannot in any degree be consolatory, since the table shows that nearly 1 in every 500 of the population dies every year from tuberculosis, and that at least 1 in every 250 is suffering from the disease. Relatively to the death-rate of the whole province it is high as seen by the county populations apart from the large cities, as set forth in the following tables.

The following tables taken from the United States census returns for 1890, and from British reports, are introduced for comparison with tables K. and L. and diagram on pages 12 and 13.

*Table M.—Showing Deaths from Tuberculosis in United States during Census year, 1890.*

| State Divisional Groups.        | Year. | Number. | Population. | Ratio per 1,000 of population. |
|---------------------------------|-------|---------|-------------|--------------------------------|
| North Atlantic Division .....   | 1890  | 37,443  | 17,401,545  | 2.2                            |
| South Atlantic Division .....   | 1890  | 14,670  | 8,857,920   | 1.7                            |
| North Central Division .....    | 1890  | 29,922  | 23,362,279  | 1.3                            |
| Southern Central Division ..... | 1890  | 15,304  | 10,972,983  | 1.4                            |
| Western Division .....          | 1890  | 4,564   | 3,027,613   | 1.5                            |
| England and Wales .....         | 1893  | 67,742  | 29,731,100  | 2.15                           |
| City of London .....            | 1893  | 11,426  | 4,211,743   | 2.70                           |
| Ireland .....                   | 1893  | 9,869   | 4,615,312   | 2.13                           |

|                       | Ratio per 1,000. |       |
|-----------------------|------------------|-------|
|                       | 1889.            | 1892. |
| Scotland :            |                  |       |
| Whole country .....   | 2.46             | 2.3   |
| Principal towns ..... | 2.93             | 2.8   |
| Large towns .....     | 2.62             | 2.4   |
| Small towns .....     | 2.38             | 2.2   |
| Mainland—rural .....  | 1.83             | 1.7   |
| Insular—rural .....   | 1.83             | 1.7   |
| Cities :              |                  |       |
| Glasgow .....         |                  | 3.0   |
| Edinburgh .....       |                  | 2.5   |
| Dundee .....          |                  | 2.8   |

The tables above given illustrate the effect of aggregation of population.

From the following table, taken from the Annual Report of Registrar-General, Scotland, for 1892, will be seen the varying ratio which tubercular diseases have in relation to urban and rural death rates.

| District.            | Deaths from all causes per 1,000. |       |
|----------------------|-----------------------------------|-------|
|                      | 1889.                             | 1892. |
| Scotland .....       | 18.40                             | 18.61 |
| Principal towns..... | 20.83                             | 20.80 |
| Large towns .....    | 18.53                             | 18.15 |
| Small towns .....    | 17.59                             | 17.94 |
| Mainland—rural ..... | 15.73                             | 16.09 |
| “ insular .....      | 14.71                             | 16.18 |

If in the above tables the rate for all Scotland be taken as 100 we get the following ratios :

| District.            | Deaths from all causes. |       | Deaths from tubercular diseases. |       |
|----------------------|-------------------------|-------|----------------------------------|-------|
|                      | 1889.                   | 1892. | 1889.                            | 1892. |
| All Scotland .....   | 100                     | 100   | 100                              | 100   |
| Principal towns..... | 115                     | 111   | 119                              | 120   |
| Large towns .....    | 100.7                   | 97.5  | 106                              | 107   |
| Small towns .....    | 95.5                    | 96.4  | 96.7                             | 95.9  |
| Mainland—rural ..... | 85.4                    | 86.4  | 74.3                             | 74.0  |
| Insular—rural .....  | 79.4                    | 86.9  | 74.3                             | 65.1  |

In this illustration we see that, taking the principal towns for comparison, while the difference in the total death rate as compared with mainland rural areas was 30.4 per cent. in 1889, and 24.6 in 1892, that of tubercular diseases for the same years was 45.7 and 46 per cent. respectively. The value of the comparison is seen when we find that the relation of the total death rate to that of tuberculosis in small towns is almost an equation.

*Diphtheria.* The deaths from diphtheria and croup in the province during 1893 were 154 more than in 1892, and 92 more than in 1891. The deaths in cities, however, in 1893 were 418 as compared with 515 in 1892, or one-fifth less. Compared with the deaths from this disease in England the rate in Ontario is high, but it is satisfactory to be able to state that while the rate in England has been increasing, being higher in 1893 than in any year since 1858, the deaths in Ontario have been as a whole decreasing during the last ten years.

Table N.—Showing Deaths from Diphtheria, per 1,000 of population, in Ontario and other Countries and States.

| Country.      | Year. | Number. | Ratio per 1,000 of population. |
|---------------|-------|---------|--------------------------------|
| Ontario ..... | 1884  | 929     | .47                            |
| “ .....       | 1885  | 1,262   | .63                            |
| “ .....       | 1886  | 1,131   | .56                            |
| “ .....       | 1887  | 1,786   | .88                            |
| “ .....       | 1888  | 1,489   | .72                            |
| “ .....       | 1889  | 1,101   | .53                            |
| “ .....       | 1890  | 893     | .42                            |
| “ .....       | 1891  | 952     | .45                            |
| “ .....       | 1892  | 890     | .41                            |
| “ .....       | 1893  | 1,044   | .49                            |

| Montreal .....    | 1893  | .....   | .....       | .25              |
| St. Paul .....    | 1893  | .....   | .....       | .587             |
| Minneapolis.....  | 1892  | .....   | .....       | 1.9              |
| .....             | 1893  | .....   | .....       | 1.3              |

The tables give a most satisfactory showing as compared with the deaths in neighboring states. The groups of states, taken from the last United States census, show that it is only in the South Atlantic and South Central groups that the death rate is lower than in Ontario. The North Atlantic and North Central groups have a rate decidedly higher than that in Ontario, under climatic conditions which are very similar; while the rate in Ontario cities as compared with those in several neighboring states is on the whole favorable.

*Apoplexy, Paralysis, Heart Disease.* The relation of this class of diseases to the total mortality in Ontario has, from year to year, been noted, they commonly appearing amongst the ten principal causes of deaths.

The indefiniteness in the matter of classification of diseases until within the last three years prevents any comparative statements of value being made. The total deaths as compared with those under similar headings in relation to the total mortality and to the deaths per 1,000 are given in the following tables:

Table O.—Showing Deaths by Counties from Apoplexy, Paralysis and Heart Diseases.

| Apoplexy.           | Age periods. |      |       |        |        |        |        |        |        |        |        |        |                 |               | Total deaths<br>per 1,000.     |

| Per cent. of whole..... |  | 1.1            | .1       | 1.0       | 1.3       | 1.5       | 1.6       | 2.3       | 3.0       | 3.6       | 4.9       | 5.6       | 8.2       | 9.4       | 11.0      | 12.1      | 13.4      | 10.8      | 5.4       | 2.7       | .5        | ....       | ....       | .....                       |

It has been generally believed that the central plateau and higher inland districts of the province have a relatively high incidence of deaths from diseases of the circulatory organs; and an examination of the deaths from some counties might seem to point to that conclusion; but there are, when closely examined, too many factors entering into the question, and the total deaths from any one disease of this class are too small to allow conclusions to be drawn of a safe or satisfactory character, except for a long series of years. A comparison, however, of deaths from these classes of diseases with the same in England and Wales and Scotland may prove of interest.

### Amendments to the Act.

The study which has been made in the preceding pages of the various returns for births, marriages and deaths again brings into prominence certain defects in the matter of complete returns, which have been specially referred to in the annual report for several past years. The remedies for some of these defects which have been deemed desirable have likewise been pointed out, and the urgent necessity for them makes itself daily manifest in the imperfect results of searches in the records for births, or deaths occurring in years past and upon the evidence of which the material interests of many persons often depend.

Thus there were issued in the past three years the following number of certificates :

|                | 1892. | 1893. | 1894. |
|----------------|-------|-------|-------|
| Births.....    | 85    | 98    | 103   |
| Marriages..... | 38    | 46    | 48    |
| Deaths.....    | 148   | 200   | 183   |

In addition to those applications for which certificates were issued from letters on file requesting that search be made and certificates issued, there were 127 in 1894; but a very considerable addition to this must be made of applications made personally, by telephone from legal firms in Toronto, and occasionally by telegrams in urgent law cases.

While the unsuccessful searches in a good number of instances are for records of births, marriages and deaths, which occurred before the Registration Act came into force, yet many were applications for certificates within this period (1869) which could not be granted in the absence of any record. Taking all together probably not much less than 1,000 applications were made in 1894, and with years the demand will become greater as more questions of heirship to property arise.

In the report of the Inspector, Col. R. B. Hamilton, included in this report, the condition of the returns in some municipalities is commented upon, and he has again pointed out the direction in which improvements in registration are demanded and has presented recommendations with a view to this end. Summing up the recommendations made in previous reports, they include principally :

1. Certain amendments by which the duties of division registrars, under certain conditions, are made more plain.
2. A clause to prevent burials by undertakers or others without certificates of a medical health officer, or a coroner.
3. The supplying of an index book for the use of division registrars, whereby a local record of births, marriages and deaths may be kept.
4. The increase of the fee for registration to an amount sufficient to recompense the division registrar for obtaining complete records of births, marriages and deaths.

---

Other minor improvements might with advantage be made, notably that by which the division registrars cannot be deprived, by any prior agreement for commuting the amount, of any fees which they would receive for services performed under the provisions of the Act relating to births, marriages and deaths.

Trusting that these recommendations, the need for which becomes, year by year, more urgent, if completeness of returns is to be approximated, may receive your early consideration,

I have the honor to be

. Your obedient servant,

PETER H. BRYCE,

Deputy Registrar-General.

---

## REPORT OF THE INSPECTOR.

TORONTO, January 2nd, 1895.

TO THE HONORABLE RICHARD HARCOURT,  
Registrar-General of Ontario.

SIR,—I have the honor to report that during the past year I visited for purposes of inspection the division registrars of 115 municipalities within the following counties, viz.:

|            |                          |                            |
|------------|--------------------------|----------------------------|
| Algoma.    | Carleton.                | Dufferin.                  |
| Elgin.     | Frontenac.               | Grey.                      |
| Hastings.  | Kent.                    | Lambton.                   |
| Middlesex. | Leeds and Grenville.     | Lennox and Addington.      |
| Nipissing. | Muskoka and Parry Sound. | Northumberland and Durham. |
| Ontario.   | Oxford.                  | Renfrew.                   |
| Simcoe.    | Wellington.              | York.                      |

In nearly every instance the officials seem anxious to secure as complete returns as possible, and many of them go to considerable trouble and expense to attain this end, but in very few cases are the really necessary steps taken to ensure success. The reasons for this apparent anomaly are not far to seek. For years the Act has been practically a dead letter. Penalties have been threatened to be placed upon delinquents, large posters calling attention to this are to be seen in prominent places in every municipality, and every assessment paper contains the announcement in bold type that infringement of "The Act respecting Births, Marriages and Deaths" means a fine of twenty dollars, yet in the face of this we find the leading men of the district openly ignoring its provisions. Doctors, lawyers and clergymen as well as business men, farmers, laborers and in fact all classes of the community seem to think that the flaming poster and the municipal notice are simply "oft told tales" whose familiar sentences are looked upon with contempt and whose threats are as much to be feared as the stories which so often have been retailed to frighten us in our childhood's days.

As I stated in my report for the year 1892, there are many division registrars who by dint of hard work, care and attention to duties, far in excess of any remuneration they receive, secure fairly correct returns. To these men all credit is due, and I am sure their actions must make other division registrars whose returns are on their face absurdly small feel that they are neglecting their duties. I give a few illustrations to show the great disparity in the several returns of births and deaths for the year ending December 31st, 1893. Of course it must be borne in mind that "circumstances alter cases," and that in some localities a much larger birth and death rate does actually exist than in others, but the comparisons I make are calculated as nearly as possible on an equitable basis:

*Algoma.*

|                             | Births.      | Deaths.      |

| Richmond Hill, village ..... | 8 "            | 2 "          |

It will thus be seen that the birth rate runs from 46 per thousand down to actually nothing, while the death returns show 26. as the highest and 2. as the lowest. Can it for one moment be considered that returns such as these are at all reliable? Surely no one will think such a great difference in rates can exist in Ontario.

In some municipalities the birth returns seem to be fairly complete, while the death returns show very poorly; in other instances the reverse is the case. Very seldom indeed does it appear that births and deaths are both nearly reported in full.

In previous reports I endeavored to point out some of the difficulties experienced by Division Registrars in the carrying out of the Act, and also made a few suggestions in reference to some needed changes which I considered would simplify its provisions. After another year's experience I have not had reason to change my mind very much on the subject, and I will here briefly again call to your attention the apparent drawbacks and the proposed amendments.

1. The fee for registration is altogether too small. It does not pay any man to carry out the work required for the paltry pittance allowed.

2. The duties of the Division Registrar are not clearly defined, and considerable difference of opinion exists as to what they may be called upon to do.

3. It is almost as much as his position is worth for a Division Registrar to prosecute residents of their municipalities for non-registration.

4. Owing to the fact that Division Registrars are not called upon to keep any book of records the office does not seem to be of any great importance; in fact, it is looked upon as a kind of "go-as-you-please" auxiliary to their regular business.

5. I find that Division Registrars as a rule receive no assistance and scarcely any information from practicing physicians in their districts, and this negligence on the part of such an influential class in the community naturally leads the ordinary citizen to think he also can do about as he pleases as to registration.

6. In many municipalities the "Registration Act" is to all intents and purposes a "dead letter," and the people know little of its origin, the reasons for its existence, or the penalties attached to the non-observance of its provisions.

These are the main obstacles which make it difficult to enforce the Act, and I would respectfully make the following suggestions, which, if carried into effect, would, I think, tend towards a great improvement in the returns.

1. The fee should be increased, and, as the difficulties of obtaining the necessary information are greater in rural than in urban municipalities, and especially great in unorganized districts, I would recommend that in cities, and towns over 5,000 inhabitants, the fee be 15 cents for each registration, in towns of 5,000 and under, villages and organized townships 20 cents each, and in unorganized districts 25 cents each.

2. The duties and powers of the Division Registrar should be clearly laid down, so that all interested parties could govern themselves accordingly.

3. Prosecutions should be made by the Department. The Division Registrar should be relieved from this duty but compelled to send names of delinquents to the Inspector.

4. Each Division Registrar should be supplied with properly ruled books in which to keep duplicate entry of each birth, marriage and death received by him.

5. The medical profession should be given to clearly understand that there are certain duties in connection with the Act which they are called upon to perform.

6. Steps should be taken by means of notices in the local papers, posters etc., to let all citizens know that the Registration Act is actually in force, and probably the most effective way would be to institute a series of prosecutions in different sections of the province.

There are a number of other points which will arise when the amendments to the Act are under consideration, some of them of considerable importance, but as they are chiefly matters of detail I do not mention them here.

In concluding this report I desire to state that I do not think any half measures will answer. The mere keeping of a book by the Division Registrars as has been proposed in the Legislature will be of little value in itself. The whole Act must be revised, and after this revision has taken place its provisions must be rigidly enforced. By this means alone can we ever hope to make the returns of births, marriages and deaths as trustworthy as they should be in the Province of Ontario.

I have the honor to be, Sir,

Your obedient servant,

R. B. HAMILTON,

Inspector.

TABLE 1.

Table shewing the total number of Births, Marriages and Deaths in each County in 1893.

| Counties.      | Births.     |                      |           | Marriages.      |                      |           | Deaths.         |                      |           | Totals.         |                      |     | Ratio to 1000 of the population. |      |      |
